Operations Dashboard - Functional Test Checklist

CLOZR mobile app (Flutter) | Build: debug, dev API | Tester: Claude (automated) | Date: 10 Nov 2026 | Env: dev.clozr.tech (UAT)

Run on emulator-5554 as sufail.salim@nexotech.cc (CRM + helpdesk + PMO). Green tick = Pass, red cross = Fail, empty boxes = not tested. The dev API returned 502 from about 8:32 pm for 15+ minutes, so the remaining rows were not run.

1. Operations dashboard (home)

#	Check	Steps / expected result	Pass	Fail	Notes
1	**Open dashboard**	Open Operations. Title 'Operations / Dashboard' with today's date; no error state.	☑	☐	Title 'Operations / Dashboard' with Tue, 10 Nov; no error state.
2	**Period**	Change 'Period'. KPI figures recompute for the chosen range.	☐	☒	Changed Period through all 6 presets: the 4 KPI tiles never changed (1 / 1 / 2 of 6 / dash). Only the 'Tasks Completed Grid' recomputed (Year to date: High 0/1, Medium 0/1). Code comment says tile counts are kept live by design, so confirm intent. Trend badges never showed for this user.
3	**KPI cards**	'My Active Projects', 'My Overdue Tasks' (Past their due date), 'Tasks Completed' (All my tasks), 'My Avg Task Cycle' (Median completion time) show correct numbers; tapping a card opens the matching filtered list.	☐	☒	Labels and subtitles correct. Active Projects 1 matches the Projects list (1). Tasks Completed 2/6 matches the list. My Overdue Tasks shows 1 but its list opens with 2 overdue rows (see 2.2).
4	**My Tasks**	'My Tasks' list sorts by 'Priority' / 'Due'; rows show priority pill, project, due ('No end date'); 'View more' opens the Tasks list filtered to me.	☑	☐	Rows show priority pill, project, due date and status. Priority/Due toggle works but both orders are identical for this data (High 5 Nov first either way), so the re-sort was not distinguishable. 'View more' opens Tasks, My Tasks on, All (6).
5	**Needing attention**	'My Top Tasks Needing Attention' lists closest due dates first with 'Nd over' / 'Today' / 'Nd'; empty: 'Nothing needs attention'.	☑	☐	Closest first: '5d over', 'Today', '15d', '20d'. Empty state 'Nothing needs attention' not seen (user has tasks).
6	**Completed grid**	'Tasks Completed Grid' shows PRIORITY x BEFORE DUE / AFTER DUE counts for High / Medium / Low that match the data.	☑	☐	Grid shows Urgent/High/Medium/Low x Before/After due. This month all 0; Year to date and Last 90 days: High 0/1, Medium 0/1, consistent with the 2 completed tasks. Not cross-checked against completion timestamps.
7	**Pull to refresh**	Pull down. All dashboard figures reload.	☐	☐	NOT TESTED with data. Pull-down was only exercised while dev returned 502 (error state + Retry, see 4.3).

2. KPI cards, navigation & deep links

#	Check	Steps / expected result	Pass	Fail	Notes
1	**Active projects tile**	Tap 'My Active Projects'. Projects list opens scoped to my projects (My Projects on) and the count on the tile matches the rows.	☑	☐	Tile opens Projects with My Projects on and the Open group; 1 row (CRM Data Migration) = tile count 1.

#	Check	Steps / expected result	Pass	Fail	Notes
2	**Overdue tasks tile**	Tap 'My Overdue Tasks'. Tasks list opens with the My Tasks / Overdue filter applied and the filter badge on; the count matches the tile.	☐	☒	Tile says 1 but the Tasks list opens (My Tasks + due=overdue) with 2 rows. 'Audit existing spreadsheets' due 10 Nov 00:00 is badged Overdue in the list while the dashboard shows it as 'Today' and leaves it out of the count.
3	**Completed / cycle tiles**	Tap 'Tasks Completed' and 'My Avg Task Cycle'. Each opens the matching Tasks list or stays informational as designed; no blank screen.	☐	☐	Tasks Completed tile OK: opens Tasks, My Tasks, Completed (2). 'My Avg Task Cycle' tile tap NOT TESTED (backend went down).
4	**View more**	On 'My Tasks' tap 'View more'. Tasks list opens filtered to me.	☑	☐	'View more' opens Tasks filtered to me (My Tasks, All (6)).
5	**Task row tap**	Tap a row in 'My Tasks' and in 'My Top Tasks Needing Attention'. The task detail opens; Back returns to the dashboard with the period unchanged.	☑	☐	Row in My Tasks and row in Needing Attention both open the task detail; Back returns to the Operations dashboard with Period (Last 90 days) and scroll kept.
6	**Bottom bar**	In the Operations bar switch Home / Projects / Tasks and back. Each tab opens its own screen and the active tab is highlighted.	☑	☐	Home / Projects / Tasks switch correctly; active tab highlighted; Home returns to Operations > Dashboard.
7	**Shared link**	Open clozr://app/operations/tasks/<id> and clozr://app/operations/projects/<id>. The right detail opens; Back lands on a sensible list.	☐	☐	NOT TESTED: needs task/project ids from the API and dev returned 502.

3. Data accuracy & edge cases

#	Check	Steps / expected result	Pass	Fail	Notes
1	**Compare with web**	For the same user and period, compare every KPI, the My Tasks list and the Completed grid with the web Operations dashboard. Numbers match.	☐	☐	NOT TESTED: no web dashboard comparison done.
2	**Period boundaries**	Pick each Period option in turn (including the widest and narrowest). Figures recompute, no stale values, no spinner left running.	☐	☐	Partly tested: This month, Last month, Last 30 days, Last 90 days and Year to date cycled with no spinner stuck; tiles stay unchanged (see 1.2). This quarter and Custom range NOT TESTED.
3	**New user / no data**	User with no projects or tasks: tiles show 0 / '-', lists show their empty text ('Nothing needs attention'), grid shows zeros; no crash.	☐	☐	NOT TESTED: no user without data was available.
4	**Long names & many rows**	Task or project with a very long name and a user with many tasks: text truncates cleanly, nothing overflows, scrolling stays smooth.	☐	☐	NOT TESTED.
5	**Overdue wording**	Task due yesterday shows 'Nd over', due today shows 'Today', future shows 'Nd'. Sorted closest due date first.	☑	☐	'5d over' (due 5 Nov), 'Today' (due 10 Nov), '15d' (25 Nov), '20d' (30 Nov); ascending by due date.
6	**Sort toggle**	'My Tasks' sort by Priority then Due. Order changes immediately and the choice does not break the list.	☐	☐	Priority/Due toggle taps cleanly but the order is identical for the available data, so re-sorting is NOT confirmed.

4. Permissions & edge cases

#	Check	Steps / expected result	Pass	Fail	Notes
1	**Module guard**	Without the 'project' and 'project_task' modules: Operations does not appear in the menu and the dashboard route is blocked.	☐	☐	NOT TESTED: only a user with both modules (sufail) was exercised; dev went down before other logins.
2	**Partial access**	User with only 'project' (no 'project_task') or only 'project_task': tiles and links for the missing module are hidden or blocked with a clear message.	☐	☐	NOT TESTED (same reason).
3	**Offline**	Network off: dashboard shows an error state with retry; Retry reloads once the network returns; no crash.	☐	☐	While dev returned 502: error state 'Server error' + Retry shown. With emulator network off: red 'No internet connection' banner, but the body still read 'Server error. Please try again shortly.' Retry reload after recovery NOT verified (502 persisted 15+ min).
4	**Back navigation**	Back from any screen opened from the dashboard returns to it with the period and scroll position intact.	☐	☒	Back from a task detail returns to the dashboard with period and scroll intact. But Back from a list opened by a KPI tile or 'View more' lands on the main (CRM) Dashboard, not Operations > Dashboard.
5	**Session expiry**	Expired session while on the dashboard: user is sent to sign-in; after signing in the dashboard loads.	☐	☐	NOT TESTED.
