Operations Projects - Functional Test Checklist

CLOZR mobile app (Flutter) | Build: debug, dev API | Tester: Claude (automated) | Date: 11 Nov 2026 | Env: dev.clozr.tech (UAT)

Run on emulator-5554 as ashish.kurian (admin), sufail.salim (PMO), neeraja.pradeep (CRM only) and sreekesh (other org). cijo.g and superadmin@clozr.com returned 401 on dev. Green tick = Pass, red cross = Fail, empty boxes = not tested / inconclusive.

1. Projects list

#	Check	Steps / expected result	Pass	Fail	Notes
1	**Open Projects**	Tap Projects. Title 'Projects'; project cards with status, priority, progress, manager; no error state.	☑	☐	Title 'Projects'; cards show status pill, priority pill, progress bar/%, end date and assignee avatars; no error state (as sufail and admin). Cards show avatars, not a labelled 'manager'.
2	**Search**	Type in 'Search projects...'. List narrows live; clearing restores.	☑	☐	Typing 'CRM' narrowed 5 -> 1 (CRM Data Migration) with chip counts re-computed; clearing restored all 5.
3	**Status chips**	Tap status group chips and the org's status lanes. Counts match rows; All clears.	☐	☒	Admin: All/Open/Closed groups and lanes work (Open 4, Closed 1; Planning 2 lane shows 2 rows). sufail (PMO user, project-types 403): lane chips (All/Planning/Active/On Hold/Completed/Cancelled) show every lane except All as empty, e.g. Planning (2) -> list 'No projects match your filters' and own count drops to (0). API ?status= returns 2. See D-P1.
4	**My Projects / Archived**	'My Projects' shows only projects I manage or am assigned to; 'Archived' shows archived ones. Empty: 'No projects assigned to you' / 'No archived projects' + 'Back to active projects'.	☑	☐	sufail 'My Projects' = 1 (CRM Data Migration), matching the API (manager = sufail). 'Archived' empty = 'No archived projects' + 'Back to active projects'. sreekesh (other org): Archived lists the 2 archived projects (ARCHIVED tag); My Projects = 1. 'No projects assigned to you' text not captured.
5	**Filter drawer**	Apply Project type, Status, Priority, Customer (incl. 'Internal project'), Project manager, Assignees, Team, Schedule health (Overdue / Due in 14 days / On track), Expected end / start, Estimated cost, Include archived. Toast 'Filters applied'.	☐	☒	Admin: drawer has all fields (type, status, priority, customer incl. 'Internal project', manager, assignees, team, health, expected end/start, cost, include archived). Status=Planning -> 2, health Overdue -> 1 (correct), toast 'Filters applied'. FAIL for sufail: drawer never opens (the filter sheet waits on the catalogs; /projects/project-types/ returns 403). See D-P2. Minor: 'Apply - N results' preview did not update in places (D-P3).
6	**Clear filters**	Tap 'Clear filters'. Toast 'Filters cleared'.	☑	☐	'Clear filters' resets the list; toast 'Filters cleared'.
7	**Saved views**	Save: 'View ... saved'; tap chip: 'View ... applied'; delete: 'View deleted'; removed: 'That view is no longer available.'	☑	☐	Saved 'QAOverdu' -> toast 'View "QAOverdu" saved'; chip tap -> 'View "QAOverdu" applied' (1 row); chip x -> 'Delete "QAOverdu"?' confirm -> 'View deleted'. 'That view is no longer available.' not reproducible (needs delete from another device).

#	Check	Steps / expected result	Pass	Fail	Notes
8	**Pull to refresh**	Rows, status catalog and saved views reload.	☑	☐	Pull-down shows the refresh spinner and the list reloads (5 rows). Reload of status catalog/saved views not independently observed.
9	**Empty states**	No data: 'No projects yet' + 'New Project'. No match: 'No projects match your filters' + 'Clear filters'.	☑	☐	No-match state 'No projects match your filters' + 'Clear filters' seen (sufail lane chip). 'No projects yet' + 'New Project' NOT TESTED: org always has 5 projects.

2. Create / edit project

#	Check	Steps / expected result	Pass	Fail	Notes
1	**Open form**	Tap 'New project'. 'New Project' form with Project name, Customer, Linked quote, Project type, Priority, Expected start / end, Project manager, Assignees, Assigned team, Description, Advanced (Status, Visibility, Progress method, Estimated cost).	☑	☐	FAB '+' opens 'New Project' with Project name, Customer ('Internal project' default), Linked quote (appears after a customer is chosen), Project type, Priority, Expected start/end, Project manager, Assignees chips, Assigned team, Description, and Advanced (Status, Visibility, Progress method, Estimated cost). Description and cost sit under Advanced/scroll.
2	**Name required**	Create with blank name. Error 'Project name is required'; nothing posted.	☑	☐	Create with blank name: field turns red, 'Project name is required' shown, nothing posted.
3	**Customer / quote**	'Select customer' lists customers plus 'Internal project'; 'Linked quote' lists that customer's quotes plus 'No linked quote'.	☑	☐	'Customer' lists 'Internal project' + customers (UAT..., Manoj Nair, ...). After choosing Manoj Nair, 'Linked quote' lists 'No linked quote' + QTN-00093/00092/00091/00074/00008 with amounts.
4	**Project type**	Picker lists the org's project types from the server (not a hardcoded default).	☑	☐	Project type sheet lists Internal / External / Research / Maintenance, matching /projects/project-types/ (4 types) and the filter drawer.
5	**Dates**	Expected end before start shows 'End date must be after the start date' and blocks save.	☑	☐	Start 20 Nov with end 12 Nov shows 'End date must be after the start date'; tapping Create Project stays on the form (not saved).
6	**People**	Project manager picker, Assignees multi-select chips, Assigned team picker all store the chosen values.	☑	☐	Manager Cijo, assignees Ashish + Sufail and team Development Team were saved; API confirms manager cijo.g@, assignees ashish/sufail, team id set. Assignee chips list only 3 users (Ashish/Cijo/Sufail), not Neeraja/Sreekesh - confirm intended.

#	Check	Steps / expected result	Pass	Fail	Notes
7	**Advanced**	Status (org lanes), Visibility (Default (set by your admin) / Private / Team / Organization), Progress method (Task Completion / Task Progress / Task Weight / Manual), Estimated cost accepts '18L', '20K' or '2500000' and stores the right rupee value.	☐	☒	Status lanes (Planning..Cancelled), Progress method (Task Completion / Task Progress / Task Weight / Manual) and cost '18L' -> API 1,800,000 all OK. FAIL: Visibility sheet has Private / Team / Organization only; the 'Default (set by your admin)' option is missing. '20K' and '2500000' not entered.
8	**Create success**	Tap 'Create Project'. Toast 'Project created' / 'Project created'; detail opens; project in list.	☑	☐	Create Project: toast 'Project PRJ-1016 created'; detail opens; list shows the new row and All (6). A brief 'Project not found' flash appeared on the detail for ~1 s before data loaded (D-P6).
9	**Edit project**	From detail 'Edit project'. Sections Basics, Schedule, People, Tracking prefilled; save: 'Changes saved'.	☑	☐	Edit project: sections BASICS, SCHEDULE, PEOPLE, TRACKING prefilled (name, customer, type, priority, dates, manager, assignees, team, status, visibility, method, cost). Rename to 'QA Proj A v2' -> toast 'Changes saved'; audit log shows the change.
10	**Edit blocked**	Closed / archived project shows the governance reason toast and does not allow edits.	☐	☒	Closed project PRJ-1004 is correctly blocked (no Edit button, banner 'fields are locked', long-press toast 'This project is closed - reopen it to edit.'). FAIL for an archived project (sreekesh, PRJ-1036): 'Edit project' is still shown, the edit form opens, and Save changes gave no governance toast (stayed on the form).
11	**Manual progress**	Progress method 'Manual' exposes a percent field on edit; other methods hide it.	☑	☐	Manual: edit form shows a percent input (0). Switching to Task Completion replaces it with read-only 'Progress 0% / Calculated from tasks'.
12	**Close with open tasks**	Move status to a closed lane with open tasks. Dialog 'Close project with open tasks?' - 'Keep it open' / 'Close project'; closing cancels or keeps tasks as the dialog says.	☑	☐	Dialog 'Close project with open tasks?' / '1 open task will be cancelled. Close the project anyway?' - 'Keep it open' leaves status and task unchanged; 'Close project' sets Completed/Closed, fields lock, and the open task becomes Cancelled. Reopening (status -> Active) works.

3. Project detail

#	Check	Steps / expected result	Pass	Fail	Notes
1	**Open detail**	Tap a card. Header: name, code, customer or 'Internal project', status, priority pill, progress, 'Project manager', 'Overdue' / 'Closed' / 'Archived' badges where applicable.	☑	☐	Header shows name, code, type and customer ('PRJ-1016 - External - Manoj Nair' / 'Internal project' for PRJ-1004), status pill, priority pill, progress %, 'Project manager' (Cijo George), dates, and a 'Closed' badge on the completed project. No Overdue/Archived project available to see those badges.

#	Check	Steps / expected result	Pass	Fail	Notes
2	**Not found / no access**	Bad id: 'Project not found'. Other team's private project: 'You don't have access to this'.	☐	☒	Bad id via deep link shows 'Not found - We couldn't find this project. It may have been deleted or moved.' + Retry (title differs from 'Project not found'). Other team's private project ('You don't have access to this') NOT TESTED. Also: after create, the detail briefly flashed 'Project not found' before loading (D-P6).
3	**Tabs**	Tabs Details / Tasks / Files switch correctly.	☑	☐	Details / Tasks / Files tabs switch correctly; content changes for each (details rows, task groups, files list).
4	**Details rows**	Customer, Project type, Priority, Visibility, Progress method, Expected start / end, Estimated cost, Linked quote ('Open quote' works), Project ID, Assigned team.	☑	☐	Rows seen: Customer, Project type, Priority, Visibility, Progress method, Expected start/end, Estimated cost (shows '18L'), Project ID, Assigned team. 'Linked quote' row / 'Open quote' NOT TESTED (QA project has no linked quote).
5	**Assignees**	Assignees card lists members or 'No assignees yet'; add / remove updates the list.	☐	☒	Assignees card lists members (Ashish, Sufail) or 'No assignees yet' (PRJ-1004). Long-press on the card does nothing; assignees can only be changed in the Edit form, not from the detail card. Add/remove via Edit not exercised.
6	**Project progress**	Manual method: tap progress -> 'Project progress' dialog -> toast 'Progress set to N%'. Other methods: progress is computed from tasks and read-only.	☑	☐	Manual: pencil next to progress opens 'Project progress' dialog; 40 -> toast 'Progress set to 40%', bar 40%, audit log '% Complete 0 -> 40'. Non-manual read-only state seen in the edit form ('Calculated from tasks').
7	**Task groups**	'New group' dialog 'New task group' (hint e.g. Site Work): blank -> 'Group name is required'; duplicate -> 'That group already exists'; success toast. Group menu: 'Rename', 'Delete group' -> 'Delete group "name"?' -> 'Tasks moved to No group'.	☑	☐	'New group' -> 'New task group': blank -> 'Group name is required'; 'SiteWork' -> toast 'Group "SiteWork" added'; duplicate -> 'That group already exists'. Group menu has Rename / Delete group; Delete -> 'Delete group "SiteWork"?' 'Tasks in this group move to No group...'; task moved to 'No group'. Rename NOT TESTED.
8	**Tasks tab**	'TASKS' lanes per group incl. 'No group'; empty group: 'No tasks in this group'; 'View all tasks' opens the Tasks list filtered to this project; 'Add task' opens Create task with the project preset.	☐	☒	Lanes per group incl. 'No group', 'No tasks in this group', 'View all tasks' (opens Tasks list with project filter, 1 filter) all work; 'Add task' opens Create task with the project preset. FAIL: 'Add task' under a group does not preset the group (shows 'No group'); picking SiteWork manually worked (D-P4).
9	**Task row actions**	Tick a task row to change status (missing lane: 'No matching status configured'); long-press 'Delete task?' -> 'Task deleted'; 'Overdue' pill on late tasks.	☑	☐	Tick toggles status Open <-> Completed (counts 0/1 -> 1/1 -> 0/1). Trash icon (not long-press) -> 'Delete this task?' confirm -> task removed (toast text not captured). 'No matching status configured' and 'Overdue' pill NOT TESTED.

#	Check	Steps / expected result	Pass	Fail	Notes
10	**Files**	Files tab: 'Loading files...' / 'No files attached'; 'Upload file' -> 'Uploading...' -> ' uploaded'; wrong type / size shows the failure; preview opens; picker error shows 'Could not open the file picker'.	☐	☒	'No files attached' + 'Upload file'; picker -> 'Upload file' name dialog; 'Uploading...' then 'qarenamed.png / PNG - Just now' listed. FAIL: tapping the file opens the CDN URL in the browser and it returns 403 Forbidden (curl also 403 with/without Referer) so preview cannot be seen (D-P7). Wrong type/size and picker-error cases NOT TESTED.
11	**Pull to refresh**	Reloads project, tasks, groups and files.	☑	☐	Pull-down on the detail reloaded: a task added via the API ('QA api task') and the audit log entry appeared. Files and groups reload not separately checked.

4. Permissions & edge cases

#	Check	Steps / expected result	Pass	Fail	Notes
1	**Module guard**	Without the 'project' module: Projects list, project detail, create and edit routes are blocked.	☑	☐	neeraja (CRM only): deep links to /operations/projects, /projects/<id>, /projects/new and /projects/create all show 'You don't have access to this area - Your role doesn't include this module' + 'Go to dashboard'. Operations absent from her bottom bar (Home/Leads/Tasks/Follow-ups).
2	**Create / delete permission**	Without create: 'New project' hidden and the empty-state CTA absent. Without delete: Delete blocked with permission text.	☐	☐	NOT TESTED: no available user has the Projects module without create/delete rights (sufail, sreekesh and admin all see the + button). Delete permission not exercised.
3	**Visibility**	Private project is invisible to users outside its team; Team / Organization behave as named.	☐	☐	INCONCLUSIVE: a Private project created by admin (API, PRJ-1017 'QA Private API') is still returned to sufail (list count 1, detail 200). sufail has the PMO role so may see all projects by design; needs a normal member who is not in the team. Team/Organization not checked.
4	**Offline**	Network off: lists show error state with retry; saves show error toasts; no crash.	☑	☐	Network off: list pull-to-refresh -> toast 'No internet connection' and cached rows stay; project detail -> 'You're offline / No internet connection. Check your network and retry.'; edit Save -> toast 'No internet connection ...'; no crash. List-first-load offline not tried.
5	**Back navigation**	Back from any detail returns to the list with filters, chips and scroll intact.	☑	☐	Back from a project detail returns to the Projects list with the scroll position intact. Exception D-P5: Back from the Tasks list opened via 'View all tasks' goes to the CRM dashboard, not the project.

5. UAT parity & must-not-skip checks

#	Check	Steps / expected result	Pass	Fail	Notes
1	**Filter operator toggle**	Apply a filter with a value, then flip the same option's slider / operator (is -> is not). EXPECTED: results re-query immediately (bug reported on Leads where the list did not update).	☑	☐	Status 'is' -> 2 projects; flipping to 'is not' and Apply re-queried immediately -> 3 projects (Completed/Active), correct. Minor: drawer preview 'Apply - N results' did not update after the flip (stayed 2 instead of 3) (D-P3).
2	**Status chips from backend**	Confirm the status chips / lanes at the top come from the backend catalog. Rename a status in web admin, pull to refresh: chips and counts update.	☐	☒	Admin: chips come from the backend (Open 4 / Closed 1; lanes Planning, Active, On Hold, Completed, Cancelled). Renaming a status in web admin to verify refresh was NOT possible. For sufail the chips are wrong (see 1.3).
3	**Saved filter edit**	Open an existing saved view and edit its name / filters in place. Record if only save-new / delete is possible.	☐	☒	A saved view can only be saved / applied / deleted; there is no way to edit its name or filters in place. Also after applying a view, reopening the drawer shows 'No filters set' (view not loaded into the drawer).
4	**Edit form - stale prefill**	Change a field inline on the detail, then open the Edit screen. EXPECTED: prefilled with the latest value, no 'reload to see latest changes' error on save.	☑	☐	Inline edit (long-press Priority -> High -> Save) then 'Edit project': prefilled High; Save -> 'Changes saved', no 'reload to see latest' error.
5	**Discard on Cancel**	In the edit form change a field and tap Cancel. EXPECTED: 'Discard changes?' appears the same way as on back.	☑	☐	Edit form: change progress method then Cancel -> 'Discard changes?' 'Your edits will be lost.' with 'Keep editing' / 'Discard' (same as back).
6	**Notes - multi-line & attachments**	project notes: Enter adds a line break (separate Send control); images / attachments can be inserted between text as on web.	☑	☐	Notes: Enter adds a line break (two lines posted), separate Send button; 'Insert' opens the picker, asks 'Name this attachment', and shows the file as a chip in the composer. Posting an inline attachment not sent. Matching web layout not verified.
7	**Notes with tags & mentions**	Note with #tag and @mention: picker appears, styled rendering, mentioned user notified; visible on web.	☑	☐	Mention picker lists Ashish / Cijo / Sufail and inserts '@Cijo George'; Tag picker (No tag/General/Call/Email/Meeting/Follow-up) -> 'General' pill. Posted note shows pill, line break and bold @mention. Mentioned user notification and web view NOT verified (cijo login returns 401 on dev). #tag typed inline not tested.
8	**Assign / reassign**	Assign, reassign, add / remove assignees and team on project. Toasts shown, persists after refresh, logged in activity.	☐	☒	Assignees/team can be set at create and in Edit and persist (API-confirmed). NOT verified: reassign/remove toasts, activity log for assignee changes, and detail-card assignee editing (long-press does nothing, see 3.5).
9	**File upload - rename & edit**	Upload a file, rename it via the file name dialog, replace / edit it. New name on mobile and web; preview opens the right file.	☐	☒	Upload dialog allows renaming before upload (qarenamed.png saved with that name). No option to rename, replace or edit a file after upload (long-press / tap only opens the CDN link, which returns 403).

#	Check	Steps / expected result	Pass	Fail	Notes
10	**Create / update / save**	Create a project, edit every section and save; reopen to confirm. Tasks created from the project land in the right group; project notes / comments support tags and mentions.	☑	☐	Created PRJ-1016, edited name/priority/progress/team/status, reopened: values persisted (API-confirmed cost 1,800,000, Manual, manager, assignees, team). Task created from the project landed in the chosen group once the group was selected manually (preset missing, D-P4). Notes support tags and mentions.

Defects found

D-P1 Status lane chips (Planning / Active / ...) empty the list for the PMO user sufail; admin is fine. API ?status= works. Rows 1.3, 5.2.
D-P2 Filter drawer never opens for sufail and shows no error; its catalog call GET /projects/project-types/ returns 403 for that role. Row 1.5.
D-P3 Drawer button 'Apply - N results' preview does not update after some changes (e.g. flipping is -> is not). Row 5.1.
D-P4 'Add task' under a task group opens Create task with Task group = 'No group' (group not preset). Rows 3.8, 5.10.
D-P5 Back from the Tasks list opened via 'View all tasks' lands on the CRM dashboard, not the project. Row 4.5.
D-P6 'Project not found' flashes on the detail screen right after Create Project before the data loads. Rows 2.8, 3.2.
D-P7 File preview opens https://nexocrm.b-cdn.net/... which returns 403 Forbidden (also via curl). Rows 3.10, 5.9.
D-P8 Visibility picker has no 'Default (set by your admin)' option (Private / Team / Organization only). Row 2.7.
D-P9 Archived project can still be edited: 'Edit project' shown, form opens, no governance toast. Row 2.10.
D-P10 No rename / replace / edit of a file after upload (rename only in the upload dialog). Row 5.9.
D-P11 Saved views cannot be edited in place, and applying a view leaves the drawer showing 'No filters set'. Row 5.3.
D-P12 Assignees cannot be added / removed from the detail card (long-press does nothing); only via Edit. Rows 3.5, 5.8.

Test data left on dev (delete manually): projects PRJ-1016 'QA Proj A v2' (with file qarenamed.png, note, cancelled task 'QA api task') and PRJ-1017 'QA Private API'. Saved view and the first task were deleted during the run.

Sign-off: _____ Overall result: FAIL (33 Pass, 12 Fail, 2 not concluded) Open defects: 12 (D-P1 to D-P12)
