Operations Tasks - Functional Test Checklist

CLOZR mobile app (Flutter) | Build: debug, dev API | Tester: Claude (automated) | Date: 11 Nov 2026 | Env: dev.clozr.tech (UAT)

Run on emulator-5554 as sufail.salim@nexotech.cc (CRM + helpdesk + PMO); API values cross-checked as sufail. neeraja.pradeep has no Operations access (403). cijo.g and superadmin@clozr.com returned 401 on dev. Green tick = Pass, red cross = Fail, empty boxes = not tested / inconclusive.

1. Tasks list

#	Check	Steps / expected result	Pass	Fail	Notes
1	**Open Tasks**	Operations > Tasks. Title 'Tasks'; cards show subject, ' - ' (or 'Standalone'), status pill, priority, due date, 'Overdue' badge; no error state.	☑	☐	Title 'Tasks'; cards show subject, project/'Standalone' + group, status pill, priority, assignee avatar, 'Due ...' and red 'Overdue' badge; no error state. For sufail the list opens with 'My Tasks' already ON (6 rows). Search is an icon that opens the field.
2	**Pull to refresh**	Pull down. Rows, status lanes, types, groups and saved views reload; chip counts update.	☑	☐	Pull-down on the list: no error; counts and rows reflect server changes (All 26 -> 28 after my creates, back after delete). Spinner itself not captured.
3	**Search**	Type in 'Search tasks...'. List narrows live by subject / project; clearing restores.	☑	☐	'Audit' -> 1 row (All 1 / Open 1, counts recompute); 'zzzzqq' -> empty state; clearing restores all rows. Search by project name not checked.
4	**Status chips**	Tap All, each status group and its lanes, 'Other / no status (n)' and 'Overdue (n)'. Counts match rows; lanes multi-select; All clears.	☑	☐	All 26, Open 13 (= Open 7 + Working 4 + Pending Review 2), Completed 10, Cancelled 3, Overdue 5 - all match the API (5 overdue). Lanes multi-select (Open + Working shows both); 'Clear filters' resets. No 'Other / no status' chip because no such tasks exist.
5	**My Tasks**	Toggle 'My Tasks'. Only tasks assigned to me show; empty: 'No tasks assigned to you'.	☑	☐	'My Tasks' (default ON for sufail) = 6 rows, same as the 6 tasks assigned to him in the API; toggling off -> 26. Empty text 'No tasks assigned to you' not seen.
6	**Deep links**	Open from the Operations dashboard KPI 'My Overdue Tasks' or 'View more'. List arrives filtered with the matching chip selected.	☐	☒	Dashboard tile 'Tasks Overdue' (5) opens Tasks with the filter badge (1) and the 5 overdue rows, but the 'All' chip is the highlighted one and the status chips show Open (0) / Completed (0) / Cancelled (0) while Working/Open rows are listed. See D-T1.
7	**Filter drawer**	Apply Status, Priority (Urgent / High / Medium / Low), Type, Milestone (Any / Milestones only / Exclude milestones), Include archived, Project, Task group, Assignee, Department, Due date, Expected time. Toast 'Filters applied'; badge count shows.	☐	☒	Drawer has Status (is / is not, incl. Overdue), Priority, Type (is / is not), Milestone (Any / Milestones only / Exclude), Include archived, Project (is / is not), Task group, Assignee (search, is / is not), Due date presets + From / To. Toast 'Filters applied' and badge shown. MISSING: Department and Expected time filters. See D-T2.
8	**Clear filters**	Tap 'Clear filters'. Toast 'Filters cleared'; search, chips and drawer reset.	☑	☐	'Clear filters' -> toast 'Filters cleared'; search, chips and drawer filters reset.

#	Check	Steps / expected result	Pass	Fail	Notes
9	**Saved views**	Save: 'View ... saved'; tap chip: 'View ... applied'; delete: 'View deleted'; stale: 'That view is no longer available.'; server rejection shows its message.	☑	☐	Saved 'QAView1' -> toast 'View "QAView1" saved'; chip tap applies it (badge 1, only Open rows); chip x -> 'Delete "QAView1"?' -> 'View deleted'. Stale-view and server-rejection messages not reproducible.
10	**Due date approvals**	'Due date approvals (n)' opens the inbox; approve / reject changes the task's Expected end and the count.	☐	☐	'Due date approvals' opens the Approvals inbox (header 'Approvals', pre-filtered, 'No requests match your filters', 0). No pending due-date request existed, so approve / reject was not run.
11	**Row menu**	Long-press a card: 'Edit' opens Edit task; 'Mark milestone' / 'Clear milestone' toast 'Marked as milestone' / 'Milestone cleared'; 'Delete' -> 'Delete this task?' -> 'Task deleted'; server refusal shows its message.	☑	☐	Card three-dot menu: Edit / Mark milestone (toast 'Marked as milestone') / Clear milestone (toast 'Milestone cleared') / Delete. Delete done from detail ('Task deleted'). A long-press on a card opened the detail instead of the menu - the menu is on the three-dot button.
12	**Empty states**	No data: 'No tasks yet' + 'New Task' (CTA only with create permission). No match: 'No tasks match your filters' + 'Clear filters'.	☑	☐	No-match: 'No tasks match your filters' + 'Try widening your search or clearing a filter' + 'Clear filters'. 'No tasks yet' + New Task not seen (org has tasks).

2. Create task

#	Check	Steps / expected result	Pass	Fail	Notes
1	**Open form**	Tap 'New task'. 'New Task' form: Subject, Project, Task group, Type, Assignees, Status, Priority, Expected start + Start time, Expected end + End time, Progress %, Expected time (hrs), Description.	☑	☐	'+' opens 'New Task': Subject, Project, Task group, Type, Assignees, Status, Priority, Expected start + Start time, Expected end + End time, Progress %, Expected time (hrs), Description.
2	**Subject required**	Tap Create with blank subject. Error 'Subject is required'; nothing posted.	☐	☒	With a blank subject the 'Create Task' button is greyed out (disabled), so nothing is posted but the message 'Subject is required' never appears. See D-T3.
3	**Project picker**	'Select project' lists projects plus 'No project (standalone)'. Standalone task saves without a project and shows 'Standalone task' on detail.	☑	☐	'Select project' lists all 7 projects + 'No project (standalone)'. Standalone task saved; detail shows 'Standalone task'.
4	**Task group**	Without a project the field reads 'Pick a project first'. After picking a project it lists that project's groups plus 'No group'.	☑	☐	No project: 'Pick a project first'. With 'QA Proj A v2': 'No group' + the project's group (QAG1). Task created into QAG1 appeared in the QAG1 lane on the project.
5	**Type**	'Select type' lists the org's task types; chosen type shows on detail.	☑	☐	'Type' sheet lists Development, Design, Testing, Documentation, Deployment, Review, Other; chosen 'Development' shows on the detail ('Development task - QA Proj A v2').

#	Check	Steps / expected result	Pass	Fail	Notes
6	**Status / priority**	Status chips show the org's open lanes. Priority offers 'Default (set by your admin)' plus Urgent / High / Medium / Low.	☐	☒	Priority = 'Default (set by your admin)' + Urgent / High / Medium / Low (OK). But Status chips list every lane incl. Completed, Cancelled and a pseudo-lane 'Overdue', not just open lanes. See D-T4.
7	**Assignees**	Multi-select chips; removing works; assignees show on the card and detail.	☑	☐	Assignee chips toggle (multi-select). Sufail shows on the card (SS), on the detail, and a push 'You have been assigned a task' arrived. The chip list was Sufail/Ashish/Cijo on first load and also Neeraja later (inconsistent). Removal not exercised.
8	**Dates and times**	Start / end date pickers ('Pick a date') and time pickers ('Pick time'). End before start blocks save with 'Ends before it starts'.	☑	☐	Date pickers 'Pick a date' and time pickers 'Pick time' work. End-before-start check verified on the Edit form (see 3.4); not tried on the Create form.
9	**Progress / expected time**	Progress % 0-100 and Expected time (hrs) accept numbers only; invalid values rejected.	☐	☒	Expected time: numeric keypad only ('abc' ignored). Progress % accepted 150 (shown '0150') and was silently saved as 100%; '-5' became 5. Invalid values are not rejected. See D-T5.
10	**From project**	Open 'Add task' from a project's Tasks tab. Project and group are preset; created task appears in that group.	☐	☒	Project Tasks tab > 'Add task' opens New Task with Project preset ('QA Proj A v2') and Task group 'No group'. There is a single Add task button (under No group); no per-group Add task, so a group cannot be preset. See D-T6.
11	**From ticket**	Open from a helpdesk ticket. Title 'Create task from ticket', banner 'Linked to ticket ...', CTA 'Create task'; detail shows 'From ticket' linking back.	☑	☐	Ticket TKT-0002 > menu > 'Create task from ticket': title 'Create task from ticket', banner 'Linked to ticket TKT-0002', CTA 'Create task'. Task detail shows a 'From ticket' chip; ticket shows 'Linked tasks 1'. After Create it returned to the ticket, not the task.
12	**Create success**	Tap 'Create Task'. Toast 'Task created'; detail opens; task in list and project; one task on a double tap.	☐	☒	Toast 'Task created'; task appears in the list and the project; a double tap on Create made one task. BUT the task detail does not open - the app goes back to the list / ticket. See D-T7.

3. Edit task

#	Check	Steps / expected result	Pass	Fail	Notes
1	**Open edit**	Detail 'Edit task' or list 'Edit'. Screen 'Edit task' with subtitle code / 'Changes apply on save'; sections Basics, Schedule, Classification, Progress prefilled.	☑	☐	Detail 'Edit task' (and card menu Edit): 'Edit task' + subtitle 'Changes apply on save'; sections BASICS, SCHEDULE, CLASSIFICATION, PROGRESS prefilled.
2	**Basics**	Subject, Description, Project ('No project (standalone)'), Task group, Type ('-' clears) edit and save; moving project resets group.	☑	☐	Subject, description, project, task group and type fields present and prefilled; subject / priority edits saved. Moving a task to another project (group reset) not exercised.

#	Check	Steps / expected result	Pass	Fail	Notes
3	**Status / priority / assignee**	Status lanes, Priority Urgent / High / Medium / Low, Assignee picker save correctly.	☑	☐	Status lanes, Priority (Urgent / High / Medium / Low) and Assignee picker present; priority High -> Medium saved. Assignee picker is single-select with 4 users; status / assignee change not saved here.
4	**Schedule**	Expected start / end with times; 'Ends before it starts' blocks; Expected time (hrs); Task weight picker.	☑	☐	Expected start 20 Nov, end 15 Nov -> 'Ends before it starts' under the field + toast 'Expected end date cannot be before the expected start date.' and Save blocked. Valid dates saved. Expected time and Task weight (1) fields present; time pickers not tried.
5	**Classification**	Department (e.g. Design) and Color tag save and show on detail.	☑	☐	Department 'Design' and purple colour tag saved and shown on the detail (Department Design, Color tag dot).
6	**Progress**	Milestone toggle ('Marks a key delivery point'); Progress slider / field; with subtasks shows 'Calculated from subtasks' and is read-only.	☑	☐	Milestone toggle ('Marks a key delivery point') saved: flag next to the title, Milestone Yes. With a subtask the Progress field reads '0% - Calculated from subtasks' and is read-only.
7	**Save**	Tap Save. Toast 'Changes saved'; detail reflects every change. Blank subject: 'Subject is required'.	☑	☐	Save -> toast 'Changes saved'; detail shows every change (priority, dates, milestone, department, colour); API values match. Blank-subject save not tried.
8	**Expected end approval**	Change Expected end on a committed task. Reason sheet appears; save gives 'Changes saved' or pending-approval message; task shows in Due date approvals.	☑	☐	Moving Expected end on a committed task opens 'Why is the expected end moving?' (Reason: Client requested / Dependency delayed / Capacity / Scope changed / Other + note). Save: expected end 28 Nov, committed 25 Nov kept, 'Moved 2x, +3 days'. No pending approval was created for sufail.
9	**Locked task**	Completed / cancelled task: 'This task is - fields are locked.' and 'Status and notes stay editable.'; other fields disabled.	☑	☐	Completed task shows 'This task is completed - fields are locked. Status and notes stay editable.'
10	**Not found**	Edit with a bad id shows 'Task not found'.	☐	☐	No deep link to the Edit route exists, so 'Task not found' on Edit could not be reached. Detail with a bad id is covered in 4.2.

4. Task detail

#	Check	Steps / expected result	Pass	Fail	Notes
1	**Open detail**	Tap a card. Header: subject, ' > ' or 'Standalone task', status, priority pill, assignees, 'Due ' / 'No end date', 'Waiting on n' when blocked, 'From ticket' when applicable.	☑	☐	Header: subject, 'Standalone task' or 'Development task - Project', status pill, priority pill, assignee, 'Due 28 Nov 2026' / 'No end date', 'Waiting on 1' with a dependency, 'From ticket' chip for a ticket task.

#	Check	Steps / expected result	Pass	Fail	Notes
2	**Not found / no access**	Bad id: 'Task not found' / 'This task may have been removed.' Private project: 'You don't have access to this'; tapping the project name: toast "You don't have access to this project".	☑	☐	Bad id (clozr://app/operations/tasks/0000...) -> 'Task not found.' / 'This task may have been removed.' Private-project 'no access' message not tested. Back from this screen landed on the CRM dashboard (D-T14).
3	**Details rows**	Task ID, Expected start / end with times, Expected time (hrs), Task weight, Milestone Yes / No, Department, Color tag, 'Actual: started ... completed ...'. Description or 'No description yet - use Edit to add context for this task.'	☑	☐	Task ID (project tasks, e.g. PRJ-1016-t3), Type, Expected start / end, Expected time, Task weight (when set), Milestone Yes / No, Department, Color tag, 'Actual: started ... completed ...' on completed tasks, 'No description yet - use Edit...' all shown.
4	**Status change**	Change status from the header. Toast confirms; completion blocked with 'Resolve subtasks & dependencies first' when open subtasks / dependencies exist; locked lanes read 'Locked while '.	☑	☐	Header status pill opens 'Task status' sheet. Completing a task with an open subtask is blocked: toast 'status: Cannot complete this task. The following subtasks are not completed: Sub one' (not the 'Resolve subtasks & dependencies first' wording).
5	**View only**	User without update permission: status / edits show 'You can view this task but not change it.'	☐	☐	No user with the Operations module but without update permission was available.
6	**Committed end**	Shows 'Not committed yet' or the date with 'Locked once set; admins and Executive Leadership can change it'. Setting it: 'Saved'. Non-admin cannot change it afterwards; admin change goes through the reason flow.	☐	☒	Shows 'Not committed yet' with a lock icon; the helper text 'Locked once set; admins and Executive Leadership can change it' is not shown. Committed end was set implicitly the first time Expected end was saved (no explicit 'Saved' step). sufail cannot change it (API can_change_committed_date = false). Admin flow not tested. See D-T10.
7	**Progress**	Manual progress edit saves; with subtasks reads 'Calculated from subtasks' and updates as subtasks complete.	☑	☐	With a subtask the progress is 'Calculated from subtasks': 0% -> 100% when ticked, back to 0% when unticked. Manual progress on a task without subtasks saved (clamped, see 2.9).
8	**Delete**	Menu Delete: dialog with 'This cannot be undone.' -> 'Task deleted' and back to list.	☑	☐	Three-dot menu > Delete task -> 'Delete this task?' ('This permanently removes ... Remove its dependencies and subtasks first if it's blocking others.') -> toast 'Task deleted' -> back on the list. Wording differs from 'This cannot be undone.'
9	**Pull to refresh**	Reloads task, subtasks, dependencies, files, comments and log.	☐	☐	Pull-to-refresh on the detail was not tested separately.

5. Subtasks, dependencies, files, comments

#	Check	Steps / expected result	Pass	Fail	Notes
1	**Add subtask**	Type in '+ Add subtask' and submit. Subtask appears in the list with unchecked box.	☑	☐	Typed 'Sub one' in '+ Add subtask' and tapped +: subtask added with an unchecked box; header '0/1 done'.
2	**Complete subtask**	Tick a subtask. It shows completed; parent progress recalculates; untick reverts.	☑	☐	Tick -> '1/1 done', parent progress 100%; untick -> '0/1 done', progress back to 0% (API confirms).
3	**Subtask detail**	Tap a subtask. Screen 'Subtask' with Assignee ('Unassigned' / picker), Due date ('No due date' / picker), 'Mark complete' / 'Completed', 'Part of' link to the parent task. Bad id: 'Subtask not found'.	☐	☒	Tapping a subtask opens the generic full 'Task' detail ('Task / Sub one', 'Standalone task', Completed, 'fields are locked'). There is no 'Subtask' screen with Assignee / Due date / 'Mark complete' / 'Part of' link. Subtasks also appear as separate rows in the main Tasks list and in the All count (28). See D-T8.
4	**Waiting on**	'Dependencies' > 'Waiting on' > picker 'Search tasks in this project...' ('No matching tasks' when none) -> 'Dependency added'; the task header shows 'Waiting on n'; completing it is blocked until dependencies finish.	☑	☐	Dependencies > WAITING ON > Add opens 'Waiting on' sheet with 'Search tasks in this project...' listing the project's tasks; picking one adds a chip and the header reads 'Waiting on 1'. Toast and 'No matching tasks' not captured; 'cannot complete until dependencies finish' not tested.
5	**Remove dependency**	Remove a 'Waiting on' entry -> 'Dependency removed'; header count updates.	☑	☐	Tap x on the chip -> toast 'Dependency removed'; chip and header count cleared.
6	**Blocking**	'Blocking' lists tasks that wait on this one; tapping opens them. Empty: 'Nothing yet'.	☐	☒	There is no 'Blocking' list (and no 'Nothing yet') - the Dependencies card only has 'WAITING ON' + Add. See D-T9.
7	**Files**	'Upload file' -> 'Uploading...' -> 'File uploaded'; 'Loading files...' / 'No files yet'; oversize / wrong type shows the failure; preview opens; picker error 'Could not open the file picker'.	☑	☐	Files > Upload file: system picker, then 'Upload file' dialog with editable name (uat_ops .txt -> qatf); button shows 'Uploading...'; file listed as 'qatf.txt - Just now'; tap opens a working preview (content shown). 'No files yet' shown when empty. Oversize / wrong-type failures not tested.
8	**Comments**	Post a comment. Appears with author and time; mentions render; empty comment is not posted.	☑	☐	Notes: post a note -> author, 'Just now', multi-line text; Tag (Meeting) and mention (@Cijo George) render styled; pin and Reply available. Empty note not tried.
9	**Audit log**	'Task created', 'Status changed - Open -> Working', 'Assignee changed', 'Dependency added', 'Completed by ' appear in order with author and time.	☐	☒	Log shows 'Task created', 'Milestone reached', 'Expected end changed to 28 Nov 2026, 12:00 AM', 'Note created' with author and time. Priority, department, colour and committed-date changes produced no entry; status / assignee / dependency entries not seen. See D-T11.

6. Project interaction

#	Check	Steps / expected result	Pass	Fail	Notes
1	**Project Tasks tab**	Task appears in its project's group lane; moving group on edit moves the lane; deleting a group moves tasks to 'No group' ('Tasks moved to No group').	☑	☐	Task created in group QAG1 appears in the QAG1 lane on the project Tasks tab. Deleting the group -> toast 'Tasks moved to No group' and the task moved to No group. Moving a group through Edit not tested.
2	**Project progress**	Completing tasks updates the project's progress per its method (Task Completion / Task Progress / Task Weight); Manual projects unaffected.	☐	☐	Test project uses the Manual method; Task Completion / Progress / Weight updates were not exercised.
3	**Project status**	Tasks in a closed / archived project are locked; project close with open tasks prompts 'Close project with open tasks?'.	☐	☐	Not tested here (the project-close prompt was checked in the Projects run).
4	**Ticket link**	Task created from a ticket shows the ticket on detail and the ticket shows the task.	☑	☐	Task created from ticket shows 'From ticket' on its detail and the ticket shows 'Linked tasks 1' / 'Linked Operations tasks' with the task.

7. Permissions & edge cases

#	Check	Steps / expected result	Pass	Fail	Notes
1	**Module guard**	Without 'project_task': Tasks list, task detail, subtask, create and edit routes blocked.	☐	☐	neeraja.pradeep (CRM only): GET /projects/tasks/ returns 403 'You do not have permission'. The in-app route / menu for her was not walked on the emulator (login typing was unreliable).
2	**Create / delete permission**	Without create: 'New task' hidden and empty-state CTA absent. Without delete: Delete blocked with permission text.	☐	☐	No user without create / delete permission available.
3	**Update permission**	Without update: edit, status, subtasks, dependencies and files show the view-only message.	☐	☐	No user without update permission available.
4	**Offline**	Network off: list error state with retry; saves show error toasts and keep the form; no crash.	☑	☐	Offline: red 'No internet connection' banner; list keeps its cached rows (no retry state). New Task > Create -> toast 'No internet connection. Check your network and retry.' and the form is kept. No crash.
5	**Back navigation**	Back from detail / subtask returns to the previous screen with filters, chips and scroll intact.	☐	☒	Back from a detail returns to the list with chips and scroll intact. Back from the deep-linked 'Task not found' screen lands on the CRM dashboard (stack replaced). See D-T14.

8. UAT parity & must-not-skip checks

#	Check	Steps / expected result	Pass	Fail	Notes
1	**Filter operator toggle**	Apply a filter with a value, then flip the same option's slider / operator (is -> is not). EXPECTED: results re-query immediately (bug reported on Leads where the list did not update).	☑	☐	Project 'is' CRM Data Migration -> Apply = 4 rows. Flipping the same option to 'is not' re-counts at once ('Apply - 22 results') and the list re-queries after Apply (22 rows, Overdue chip 5 -> 4).

#	Check	Steps / expected result	Pass	Fail	Notes
2	**Status chips from backend**	Confirm the status chips / lanes at the top come from the backend catalog. Rename a status in web admin, pull to refresh: chips and counts update.	☐	☐	Chips (Open / Working / Pending Review / Completed / Cancelled) match the backend statuses; renaming a status in web admin was not done.
3	**Saved filter edit**	Open an existing saved view and edit its name / filters in place. Record if only save-new / delete is possible.	☐	☒	A saved view can only be saved new, applied or deleted - there is no way to edit its name or filters in place. See D-T12.
4	**Edit form - stale prefill**	Change a field inline on the detail, then open the Edit screen. EXPECTED: prefilled with the latest value, no 'reload to see latest changes' error on save.	☐	☐	Inline edit on the detail followed by Edit prefill was not tested.
5	**Discard on Cancel**	In the edit form change a field and tap Cancel. EXPECTED: 'Discard changes?' appears the same way as on back.	☑	☐	Changing a field then tapping Cancel, or the in-app back arrow, shows 'Discard changes?' (Keep editing / Discard).
6	**Notes - multi-line & attachments**	operations task notes: Enter adds a line break (separate Send control); images / attachments can be inserted between text as on web.	☑	☐	Enter inserts a line break (separate Send button) and the posted note shows two lines. 'Insert' opens the file picker and 'Name this attachment' dialog, and a chip sits in the composer. Posting a note that contains an attachment was not completed.
7	**Notes with tags & mentions**	Note with #tag and @mention: picker appears, styled rendering, mentioned user notified; visible on web.	☑	☐	Tag dropdown (No tag / General / Call / Email / Meeting / Follow-up) and Mention dropdown (Ashish, Cijo, Sufail) -> '@Cijo George' inserted; post renders the Meeting tag and a styled mention. Mentioned user notification / web view not verified (cijo login 401).
8	**Assign / reassign**	Assign, reassign, add / remove assignees and team on operations task. Toasts shown, persists after refresh, logged in activity.	☐	☐	Assigned Sufail on create (shows on card, push received). Reassign, add / remove assignees and team were not exercised.
9	**File upload - rename & edit**	Upload a file, rename it via the file name dialog, replace / edit it. New name on mobile and web; preview opens the right file.	☐	☒	The file name can only be changed in the pre-upload dialog. After upload there is no rename / replace / edit action; tapping the row just previews it. See D-T13.
10	**Create / update / save**	Create a task (standalone, from project, from ticket), edit every section and save; reopen to confirm. Subtask / dependency edits persist. Stale option values (type / status / group no longer in backend) are not offered in Edit.	☑	☐	Created standalone, project and ticket tasks; edited every section and saved; API values match; subtask and dependency edits persisted. Stale option values not tested.

Defects found

D-T1 Dashboard 'Tasks Overdue' deep link: list is filtered (badge 1) but the 'All' chip stays selected and the status chips show Open (0) / Completed (0) / Cancelled (0) while Working / Open rows are listed. Row 1.6.
D-T2 Filter drawer has no Department and no Expected time filter (checklist lists both). Row 1.7.
D-T3 New Task: Create button is disabled with a blank subject, so 'Subject is required' is never shown. Row 2.2.
D-T4 New Task Status chips include Completed, Cancelled and a pseudo-lane 'Overdue' instead of only open lanes. Row 2.6.
D-T5 Progress % accepts values over 100 (150 saved silently as 100%) and drops a typed '-' without any message; invalid values are not rejected. Row 2.9.

D-T6 Project Tasks tab has one 'Add task' button (under No group); there is no per-group Add task, so the group cannot be preset. Row 2.10.
D-T7 After 'Task created' the task detail does not open (returns to list / ticket). Row 2.12.
D-T8 Tapping a subtask opens the generic Task detail instead of a 'Subtask' screen (no Assignee / Due date / Mark complete / Part of); subtasks also show as separate rows in the main Tasks list and its All count. Row 5.3.
D-T9 No 'Blocking' list in Dependencies (only 'Waiting on'). Row 5.6.
D-T10 Committed end: helper text 'Locked once set; admins and Executive Leadership can change it' not shown; the date is committed implicitly when Expected end is first saved. Row 4.6.
D-T11 Audit log skips priority, department, colour and committed-date changes; marking a milestone is logged as 'Milestone reached'. Row 5.9.
D-T12 Saved views cannot be edited in place (save new / delete only). Row 8.3.
D-T13 No rename / replace of a file after upload (name only in the upload dialog). Row 8.9.
D-T14 Back from a deep-linked task screen ('Task not found') lands on the CRM dashboard. Row 7.5.

Not tested: view-only / no-create / no-delete permissions (no suitable user), Due date approvals approve / reject (no pending request), project progress methods, Edit 'Task not found', in-app route guard for neeraja, notification to a mentioned user. Test data left on dev (delete manually): tasks 'QA T2 standalone' (with subtask 'Sub one', 2 notes, file qatf.txt), 'Sub one' (subtask, shown as its own task), 'QA T3 grp' (project QA Proj A v2) and 'Quote PDF fails to download' (from TKT-0002). The saved view, group QAG1 and task 'QA T1 standalone' were deleted during the run.

Sign-off: _____ Overall result: FAIL (45 Pass, 14 Fail, 12 not tested / inconclusive) Open defects: 14 (D-T1 to D-T14)
